

Infection control measures about COVID-19

Request for cooperation if your employees or guests and so on infect with COVID-19 or they are high risk contact person.

Please note that how to throw away the garbage as below. Thank you for your understanding and cooperation.

The lifespan of the virus on the surface is from 24 hours to 72 hours. Stop throwing away the garbage during 3 days and restart throwing it away from Day 4 if your employees or guests and so on infect with COVID-19 or they are high risk contact person. After that, please continue the routine until the virus is gone. Spray antiseptic solution such as alcohol to the garbage bag inside and outside when you throw it away. Restore the originally garbage rule when they become negative.

The reason is that the process of garbage disposal has some works that workers touch the garbage.

We are sorry for the inconvenience.
